

## FEATURES

- The **Konect Grafic** is a Multimeter for electrical quantities designed for three-phase, two-phase, and single-phase alternating current (AC) systems, with panel door installation.
- Applicable for measurements at low, medium, or high voltage, through the programming of connection schemes and the ratios of Voltage and Current Transformers.
- Also applicable in **IoT (Internet of Things) and Industry 4.0** systems, as it allows integration with various platforms such as Amazon AWS, Microsoft Azure, TagoIO, among others.
- Communication through **Wi-Fi connections (MQTT and Modbus TCP), Ethernet (MQTT and Modbus TCP), Bluetooth (Modbus RTU), LoRa (LoRaWAN), and RS-485 (Modbus RTU)**. Data can be made available locally or remotely, through software, apps, mobile phones, tablets, dashboards, supervisory systems, or web platforms.
- Features a data concentrator function, gathering information from other devices such as water, gas, and oil meters. It includes a digital relay output for sending commands in control systems (ON/OFF).
- Equipped with mass memory for recording of a historical database comprising up to 20 electrical parameters, using a minimum interval of 1 minute.
- Alarm and consumption control function with relay activation and logging, facilitating the load curve survey.
- Power fail alarm records the meter shutdown times

## APPLICATIONS

- IoT, Industry 4.0, and Automation Systems
- Energy Efficiency and Cost Allocation
- Energy Cogeneration Systems (measurement in all four quadrants)
- Analysis of Circuits and Electrical Equipment
- Any application involving measurement of electrical parameters

## PRODUCT INFO

### ELECTRICAL PARAMETERS (104 parameters)

- Includes current, voltage, frequency, energy consumption, demands, powers (active, reactive, and apparent), power factor, and others.

### CONNECTION DIAGRAMS

- Mono-Phase, Two-Phase or Three-Phase systems (configurable)

### INSTALLATION

- Painel Door
- Technical support via e-mail, telephone, WhatsApp and YouTube videos.

### MASS MEMORY

- Mass Memory for generating a history of the behavior of up to 20 parameters, with minimum intervals of 1 minute between recordings. Can be used with buffering capabilities

### TIME-OF-USE MEASUREMENT AND MULTI-TARIFF

- Measurement of energy and demand during peak hours, off-peak hours, and reserved periods

### ALARMS

- Load Curve Assessment
- Consumption Control
- *Power Fail* (Electrical Failure)

### INTERFACES, READINGS & CONFIGURATIONS

- HMI composed of a display (LED) and navigation keys, allowing local reading and configurations.
- Data outputs through Ethernet, RS-485, Bluetooth, Wi-Fi, and LoRa.
- Protocols: MODBUS-RTU, MODBUS-TCP/IP, MQTT, and LoRaWAN protocols.
- Free software for reading and configuration: RedeMB (RS-485 and Bluetooth), RedeMB-TCP (Ethernet and Wi-Fi), Android system App (MQTT and Bluetooth).
- Application in IoT and Industry 4.0 systems, connection to MQTT Broker. Integration with Dashboards, Apps, and other IoT tools.
- Integration with PLCs, external HMIs, supervisory systems, and concentrators (Modbus-RTU/Modbus-TCP).

### WATER, GAS, OIL, COMMANDS....

- Up to 3 digital inputs for external pulse concentration, generated by input meters (such as water, gas). Up to 2 digital relay outputs for sending commands (On/Off).
